Goran Loncar

Serbia, Belgrade

gloncarfl@gmail.com

I'm a senior full stack developer with over a decade of hands-on experience in building scalable web applications, eCommerce platforms, automation bots, and blockchain-based systems.
 I specialize in developing end-to-end solutions that are fast, secure, and maintainable — from UI/UX to backend APIs and infrastructure.
I've worked extensively with modern JavaScript/TypeScript stacks, including React, Next.js, Node.js, and Express.
On the backend, I build RESTful and GraphQL services, design scalable architectures, and deploy to cloud platforms like AWS, Vercel, and Dockerized environments.
In eCommerce, I've delivered custom storefronts, payment gateway integrations (Stripe, PayPal), and product automation for platforms like Shopify and WooCommerce.
I've also developed bots for Telegram, Discord, and WhatsApp to automate customer support, trading, and blockchain interaction.
In the Web3 space, I write and audit smart contracts in Solidity, build dApps using ethers.js/Web3.js, and integrate with DeFi protocols, NFTs, and Layer 2 solutions.
